

# Updating of the PHP - Project

# Overview

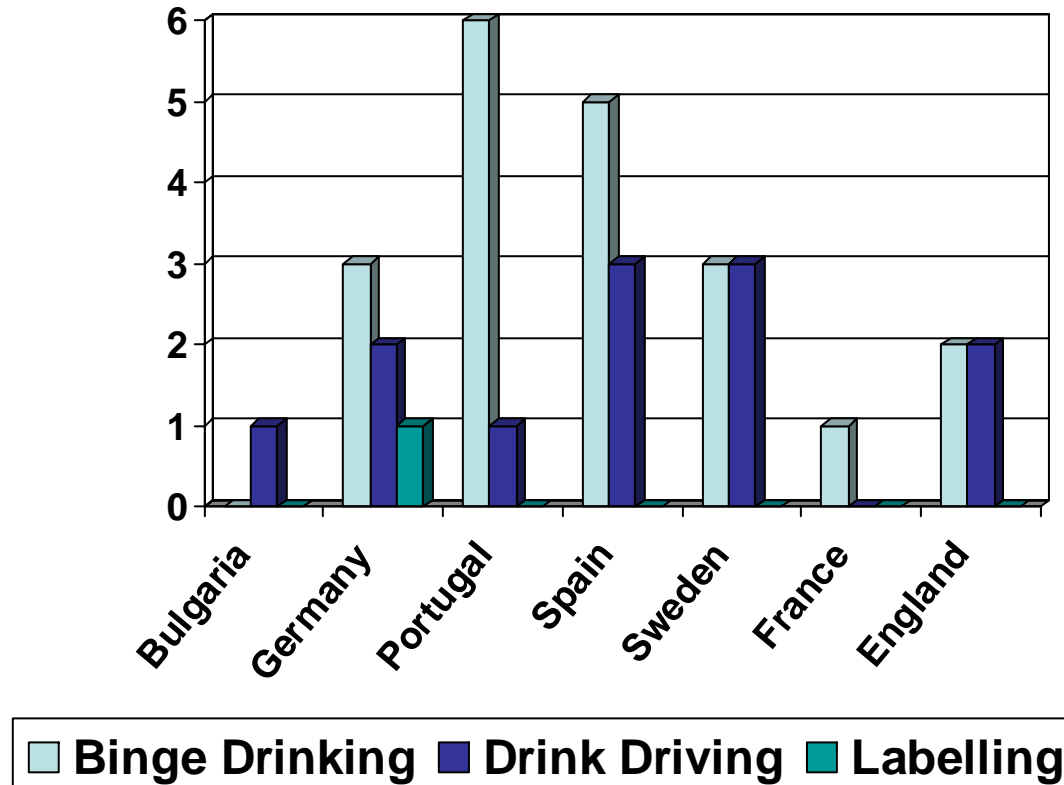

- **Administration**
- **First Results**
- **Feedback**
- **Draft Proposal: Quality Elements for the Analysis**
- **Next Steps**

# Administration

- **The first rate of the grant was transferred by the Commission!!**
- **The extension of the project time until June 2007 was confirmed by the Commission!!**

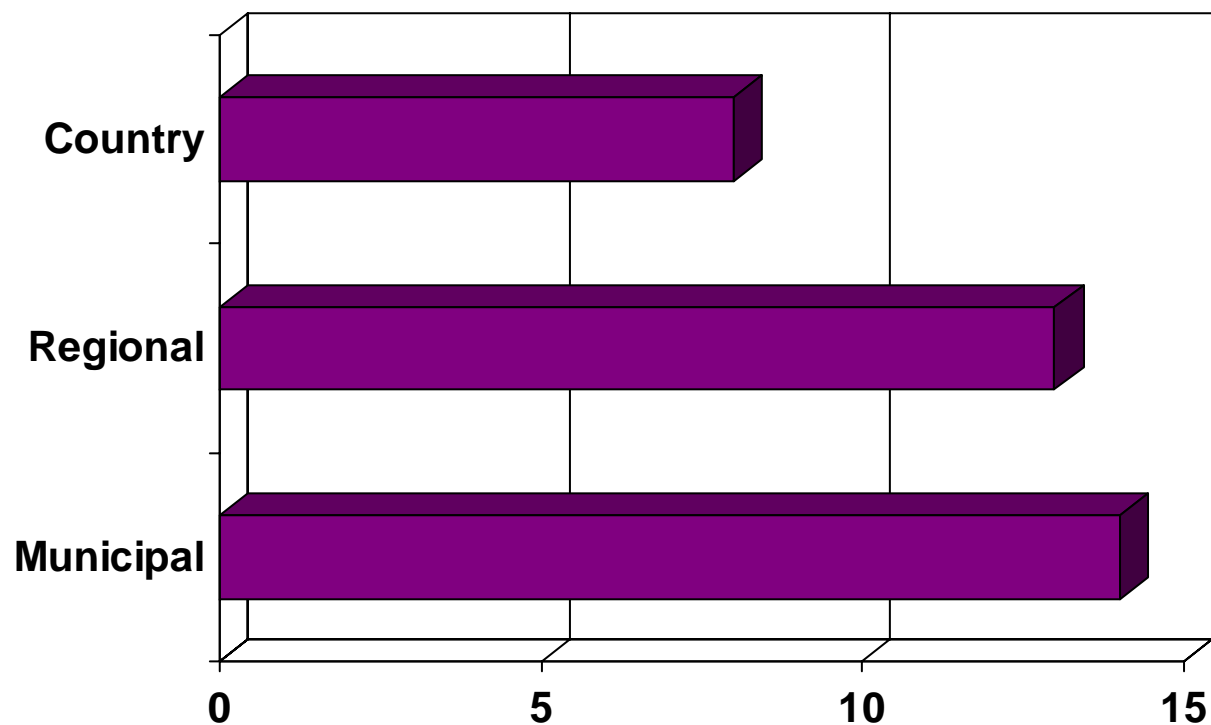

# First Results: Practices, projects or programmes

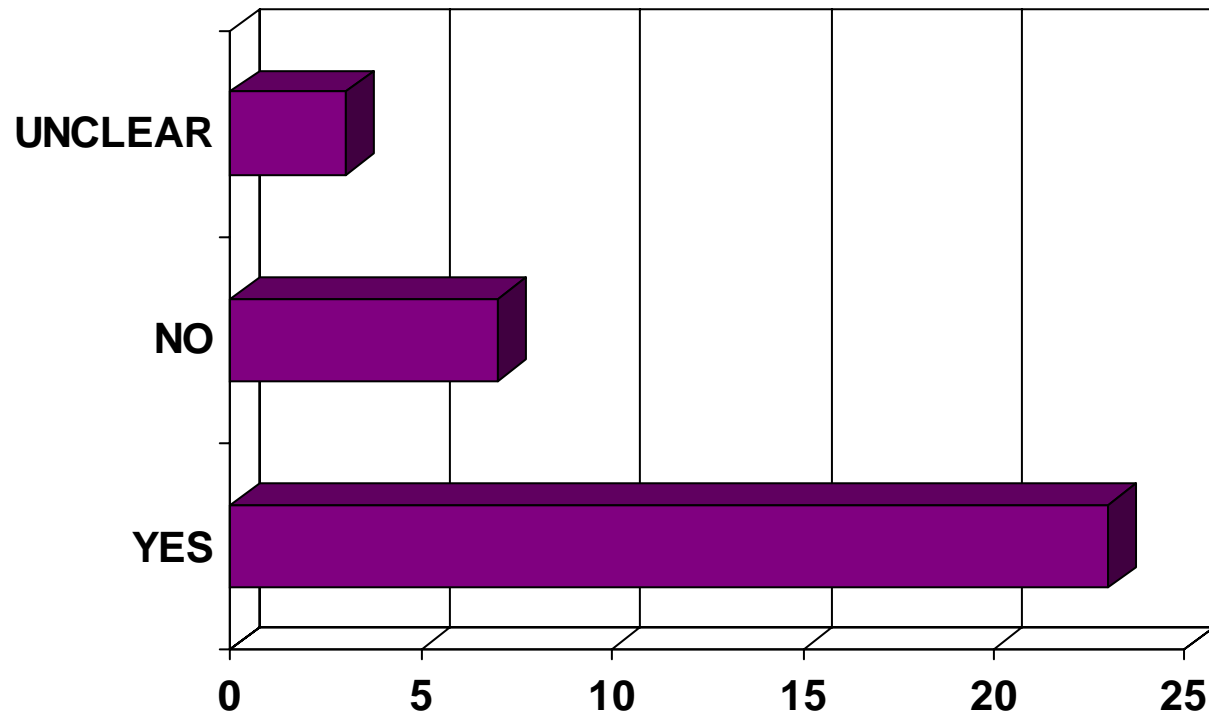

n = 33

# First Results: Level

# First Results: Evaluation

n = 33

# Feedback to the Project Partners

- very good examples
- if you want you can add documents as an annex
- most of the projects are evaluated
- some projects for Binge Drinking are indirectly targeted to the issue
- there is the expected lack of projects about labelling
- law in force and legislative amendments should be included
- use networks in your countries

# Draft Proposal: Quality Elements for the Analysis

- Needs assessment
- Low barrier method
- Setting approach
- Collaborative capacity building / partnership
- Evaluation
- Sustainability
- Transferability
- Availability of results, documents, etc.
- Transparency of the funding and other support

# Needs Assessment

## Definition:

The needs of the target group and of the actors and organisations which are involved have been analysed.

## Questions:

- How have the needs been analysed (e.g. epidemiological statistics, professional expertise)?
- How is the needs assessment linked to the design of the intervention?

# Low barrier method

## Definition:

The intervention is accessible and takes account of the necessity of the target group.

## Questions:

- How does the project contact the target group?
- In how far are communication barriers (including culture, language) considered in the intervention?

# Setting approach

## Definition:

The term setting refers to a social system in which people are active. Setting oriented interventions are aimed at the conditions of the setting and the group of people involved.

## Questions:

- How are existing communication structures, decision processes and rules taken in consideration during the planning and implementation of an intervention?

# Collaborative capacity building / partnership

## Definition:

A collaboration between different persons, institutions or sectors has been built to take action on the issue.

## Questions:

- Which type of collaboration has there been? (e.g. multisectoral collaboration, teams, multidisciplinary collaboration)
- How do these partnerships contribute to the effectiveness and efficiency of the intervention?

# Sustainability

## Definition:

The intended effect of the intervention persists after it has finished or for ongoing projects: You have good reason to expect that the results will persist.

## Questions:

- Does the intervention start a mechanism that can continue a support the outcomes of the project after it is finished?
- Is there routine to monitor the results after the project is finished?
- Will the project continue after it is finished?

# Transferability

## Definition:

The intervention or programme could be implemented in other cities, regions, countries. It should be taken in consideration that modifications are often necessary.

## Questions:

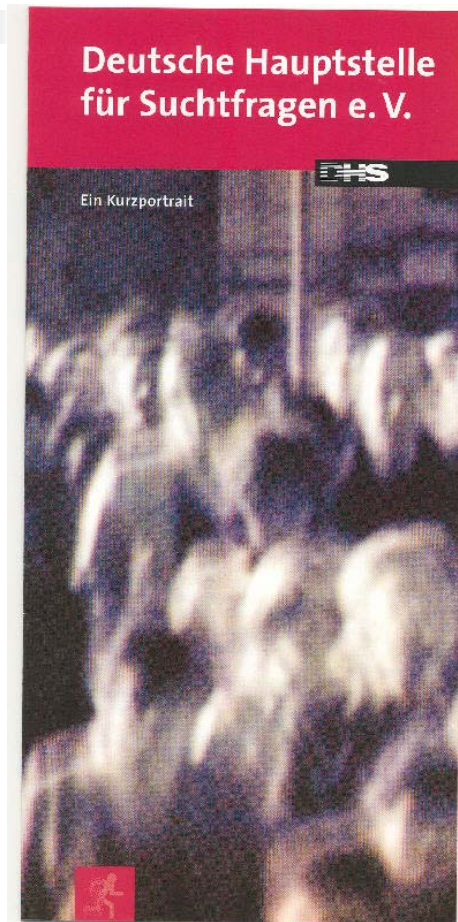

- Could the concept of the intervention be used by another actor (municipal, regional, country)?
- Initiated the intervention other projects, programmes with a similar structure, contents, etc.?

## Next steps

- Continuation of the collection of innovative PPP
- Continuation of collection of data for the data base
- Determination of criteria for the analyses
- Dissemination of the drafts of the reviews
- Dissemination of the drafts of the recommendations
- Preparation of a meeting/session during the first or second Building Capacity Project meeting (after a budget check)
